

**BAG-VALVE-MASK
APNEIC PATIENT**

STEPS TO BE PERFORMED	ACTION/VERBAL RESPONSE	POINTS POSSIBLE	POINTS AWARDED
* Takes appropriate body substance isolation precautions	I will take appropriate BSI precautions.	(1)	
* Open airway (manually or with adjunct)	I will insure an open airway either manually or by inserting an appropriate adjunct device.	(1)	
Select appropriate mask	I will select an appropriate mask and connect it to the BVM device.	(1)	
* Connect to oxygen supply	I will connect the BVM to the liter flow valve on the regulator and adjust to 15 LPM.	(1)	
Establishes and maintains a proper mask to face seal	I will place the mask over the patient's face and insure a tight seal around the mask.	(1)	
Instruct assistant to ventilate patient	I will instruct my assistant to ventilate the patient once every 5 seconds or approximately 12 times per minute. I will watch for chest rise and fall to determine proper volume.	(1)	
NOTE: Examiner must observe proper ventilations for at least 30 seconds.			

* = CRITICAL CRITERIA (Must Perform to Pass)	POINTS POSSIBLE: 6 MINIMUM PASSING SCORE (80%): 5

Date: _____

Student's Name: _____

Evaluator's Name: _____

Critical Criteria

- ___ Did not take or verbalize BSI
- ___ Did not immediately establish an open airway
- ___ Interrupted ventilations for more than 20 seconds
- ___ Did not provide high concentration oxygen
- ___ Did not provide adequate tidal volume during ventilations
- ___ Did not allow for adequate exhalation
